

MACHINE LEARNING

In Q1 to Q11, only one option is correct, choose the correct option: 1. Which of the following methods do we use to find the best fit line for data in Linear Regression? A) Least Square Error B) Maximum Likelihood C) Logarithmic Loss D) Both A and B ANS-D 2. Which of the following statement is true about outliers in linear regression? A) Linear regression is sensitive to outliers B) linear regression is not sensitive to outliers D) none of these C) Can't say ANS-A 3. A line falls from left to right if a slope is B) Negative C) Zero A) Positive D) Undefined ANS-A 4. Which of the following will have symmetric relation between dependent variable and independent variable? A) Regression B) Correlation C) Both of them D) None of these ANS-C 5. Which of the following is the reason for over fitting condition? A) High bias and high variance B) Low bias and low variance C) Low bias and high variance D) none of these ANS-C 6. If output involves label then that model is called as: A) Descriptive model B) Predictive modal C) Reinforcement learning D) All of the above ANS-A

7. Lasso and Ridge regression techniques belong to

B) Removing outliers

8. To overcome with imbalance dataset which technique can be used?

B) Regularization

D) SMOTE

A) Cross validation

A) Cross validation

C) SMOTE

C) Kernel

ANS-D

9.	The AUC Receiver Operator Characteristic (AUCROC) curve is an evaluation metric for binary		
	classification problems. It uses to make graph?		
	A) TPR and FPR	B) Sensitivity and precision	
	C) Sensitivity and Specificity		D) Recall and precision

ANS-C

- 10. In AUC Receiver Operator Characteristic (AUCROC) curve for the better model area under the curve should be less.
 - A) True B) False

ANS-A

- 11. Pick the feature extraction from below: A) Construction bag of words from a email
 - B) Apply PCA to project high dimensional data
 - C) Removing stop words
 - D) Forward selection

ANS-B

In Q12, more than one options are correct, choose all the correct options:

- 12. Which of the following is true about Normal Equation used to compute the coefficient of the Linear Regression?
 - A) We don't have to choose the learning rate.
 - B) It becomes slow when number of features is very large.
 - C) We need to iterate.
 - D) It does not make use of dependent variable.

ANS-D

ASSIGNMENT – 39

MACHINE LEARNING

Q13 and Q15 are subjective answer type questions, Answer them briefly.

13. Explain the term regularization?

ANS-Regularization is one of the most important technique to prevent the model being overfitting or underfitting.

Using this technique we can fit our machine learning model appropriately on a given test set and hence reduce the error, there are two main types of Regularization technique-Ridge Regularization and Lasso Regularization.

14. Which particular algorithms are used for regularization?

ANS-There are two algorithms are used for regularization

- 1)Ridge Regularization
- 2)Lasso Regularization
- 15. Explain the term error present in linear regression equation?

ANS-The error term includes everything that seperates model from actual reality.this means model will show non linear,unpredictable effects and measurement errors and omitted variables.
